Profile template contour gauge | 1 m (5 x 20 cm)

Item no. 861020

The template - standard length 200 mm - is a profile scanner which can theoretically be assembled and extended indefinitely. This results in increased accuracy and enormous time savings when transferring contours. Due to the flat and even contact of the template, the profile line can be easily traced over onto the workpiece which is to be adapted. The stencil can be adjusted in all directions by means of the enclosed setting angle. The scanned profile can be secured and transported in the case.
