

SELF-LOADING WHEEL DOLLIES

The design of the wheel dollies is based on the idea of moving and manoeuvring vehicles in repair or body shops and show-rooms. However, the WS Wheel Dollies have also proven indispensable in emergency operations and across parking lots. Lifting and moving vehicles in any direction can be done very quickly and easily with only 4-5 pumps, without any major effort.

OEM

Wheel Dolly 4500

Item no. 851000

The Wheel Dolly 4500 was developed for the racing car industry. Cars with tyre widths from 20 inches to 36 inches can be moved effortlessly. The device is designed for vehicle weights up to 2 tons. Twin rollers on each axle guide the tyre smoothly up and over the axle support bar to lift wider tyres

Set up			Tech. Data				
Load rating max.	Tyre widths	Wheel sizes	Unit weight	Mechanism	Contact rolls	Castors	Design
510 kg (1 pc.)	up to 500 mm	20" - 26"	19.5 kg	Double pawl	4 pcs. (2 x 2)	4 x 3"	Steel frame
2.04 t (4 pcs.)					Galvanized steel		

Wheel Dolly 5211 R/L

Item no. 851001 right version

Item no. 851007 left version

The Wheel Dolly 5211 is a proven and reliable product and shouldn't lack in any workshop. The model 5211 can lift tyre widths up to 270 mm and wheel sizes between 11 and 34 inches and thus accom-

modate a very high percentage of cars and light trucks sold today. It uses a bi-directional linear ratchet for the jack portion and has a 5-degree offset pedal angle for additional foot-to-tire clearance.

Wheel Dolly 6200 R/L

Item no. 851002 right version

Item no. 851003 left version

The model 6200 is an absolute workhorse due to the high-strength steel rollers and heavy-duty nylon casters with double ball bearings and is particularly suitable for vehicle weights up to 2860 kg and tire widths up to 330 mm. The special design en-

sures smooth movement under heavier loads. Equipped with the largest rollers of the product line, which allow further ground clearance, the model is unbeatable especially when lifting cars onto a low loader.
